

### Question:

Water pours weakly from an open hose but sprays hard when you cover most of the end with your thumb. When in more water coming out of the hose?

1. When the hose end is uncovered.
2. When your thumb covers most of the end.

### Limits to Flow

- Fluid's energy is fixed.
  - Speed limited by kinetic energy.
  - Kinetic energy limited by pressure.

### Limits to Flow

- Fluid's energy is fixed.
  - Speed limited by kinetic energy.
  - Kinetic energy limited by pressure.
- Fluid has viscosity.
  - Fluid at walls is stationary.
  - Remaining fluid experiences viscous forces.

### Viscous Forces

- Oppose relative motion within a fluid.

### Viscous Forces

- Oppose relative motion within a fluid.
- Similar to sliding friction – waste energy.

### Viscous Forces

- Oppose relative motion within a fluid.
- Similar to sliding friction – waste energy.
- Fluids are characterized by their viscosities.

### Flow in Pipes

- Increases as 1/viscosity.

### Flow in Pipes

- Increases as 1/viscosity.
- Increases as 1/pipe length.

### Flow in Pipes

- Increases as 1/viscosity.
- Increases as 1/pipe length.
- Increases as pressure difference.

### Flow in Pipes

- Increases as 1/viscosity.
- Increases as 1/pipe length.
- Increases as pressure difference.
- Increases as (pipe diameter)<sup>4</sup>.

### Flow in Pipes

- Increases as 1/viscosity.
- Increases as 1/pipe length.
- Increases as pressure difference.
- Increases as (pipe diameter)<sup>4</sup>.
- Poiseuille's law:

$$\text{Flow} = \frac{\pi \cdot \text{Pressure Difference} \cdot \text{Pipe Diameter}^4}{128 \cdot \text{Viscosity} \cdot \text{Pipe Length}}$$

### Flow in Plumbing

- Flowing fluids lose energy to viscous drag.

## Flow in Plumbing

- Flowing fluids lose energy to viscous drag.
- Faster flow leads to more viscous losses.

## Flow in Plumbing

- Flowing fluids lose energy to viscous drag.
- Faster flow leads to more viscous losses.
- Faster flow causes quicker drop in pressure.

## Question:

Water pours weakly from an open hose but sprays hard when you cover most of the end with your thumb. When in more water coming out of the hose?

1. When the hose end is uncovered.
2. When your thumb covers most of the end.

## Types of Flow

- Laminar Flow
  - Nearby regions of fluid remain nearby.
  - Viscosity dominates flow.

## Types of Flow

- Laminar Flow
  - Nearby regions of fluid remain nearby.
  - Viscosity dominates flow.
- Turbulent Flow
  - Nearby regions of fluid become separated.
  - Inertia dominates flow.

## Reynolds Number

$$\text{Reynolds number} = \frac{\text{Density} \cdot \text{Obstacle length} \cdot \text{Flow speed}}{\mu}$$

- Reynolds number controls type of flow.

## Reynolds Number

$$\text{Reynolds number} = \frac{\text{Density} \cdot \text{Obstacle length} \cdot \text{Flow speed}}{\text{Viscosity}}$$

- Reynolds number controls type of flow.
- Below about 2300 : Laminar flow.
  - Viscosity dominates.

## Reynolds Number

$$\text{Reynolds number} = \frac{\text{Density} \cdot \text{Obstacle length} \cdot \text{Flow speed}}{\text{Viscosity}}$$

- Reynolds number controls type of flow.
- Below about 2300 : Laminar flow.
  - Viscosity dominates.
- Above about 2300 : Turbulent flow.
  - Inertia dominates.

## Fluids and Momentum

- Fluids carry momentum.

## Fluids and Momentum

- Fluids carry momentum.
- Momentum is transferred by impulses.
  - Product of Pressure imbalance times Time.

## Fluids and Momentum

- Fluids carry momentum.
- Momentum is transferred by impulses.
  - Product of Pressure imbalance times Time.
- Moving fluids can be hard to stop.
